

# NMAP

## **What is Nmap?**

Nmap (Network Mapper) is a free and open-source tool for network discovery and security auditing.

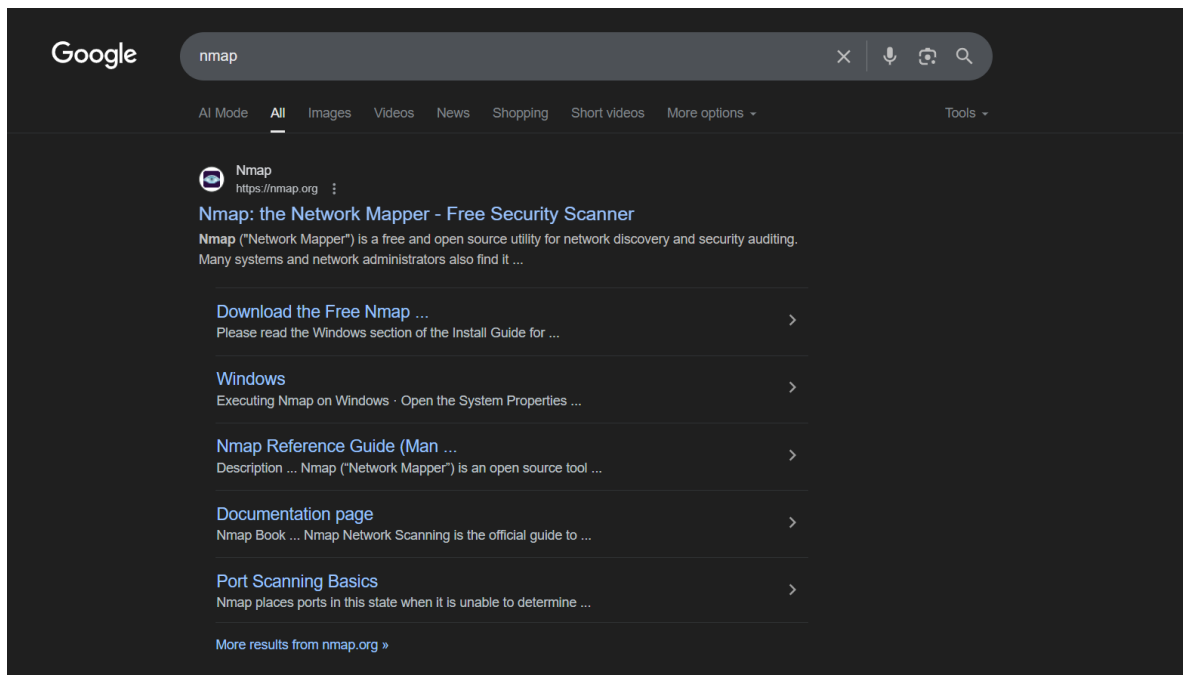

## **Why install Nmap?**

Useful for penetration testing, port scanning, and vulnerability detection.

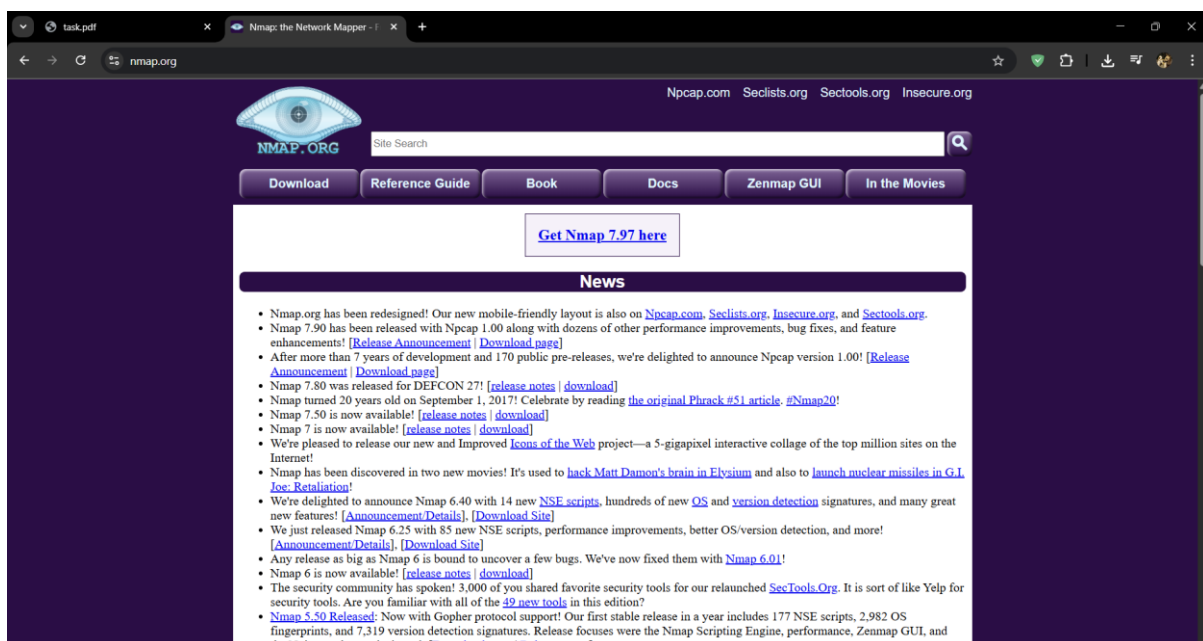

## **System Requirements**

- Supported OS: Linux, Windows, macOS
- Minimum RAM/CPU: 512MB RAM, basic CPU
- Internet connection (for package download)

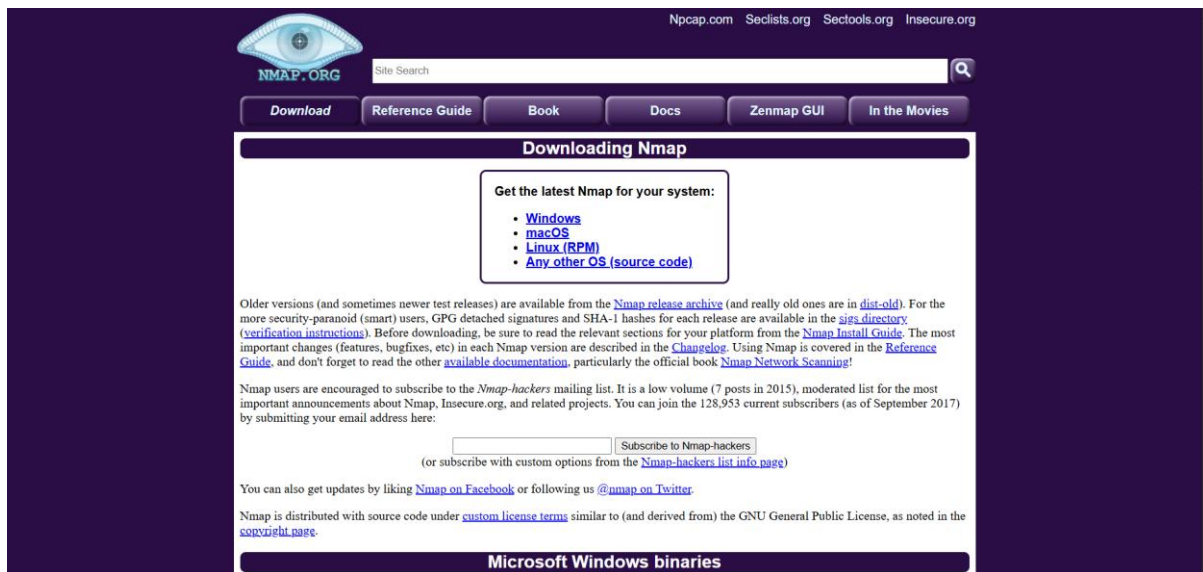

# Installing Nmap on Windows

Visit the official Nmap website <https://nmap.org/download.html>

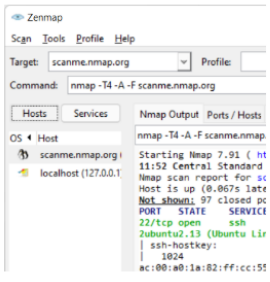

Click on **Download** section

Scroll to the **Microsoft Windows binaries** section.

Microsoft Windows binaries

Please read the [Windows section](#) of the Install Guide for limitations and installation instructions for the Windows version of Nmap. It's provided as an executable self-installer which includes Nmap's dependencies and the Zenmap GUI. We support Nmap on Windows 7 and newer, as well as Windows Server 2008 R2 and newer. We also maintain a [guide for users who must run Nmap on earlier Windows releases](#).

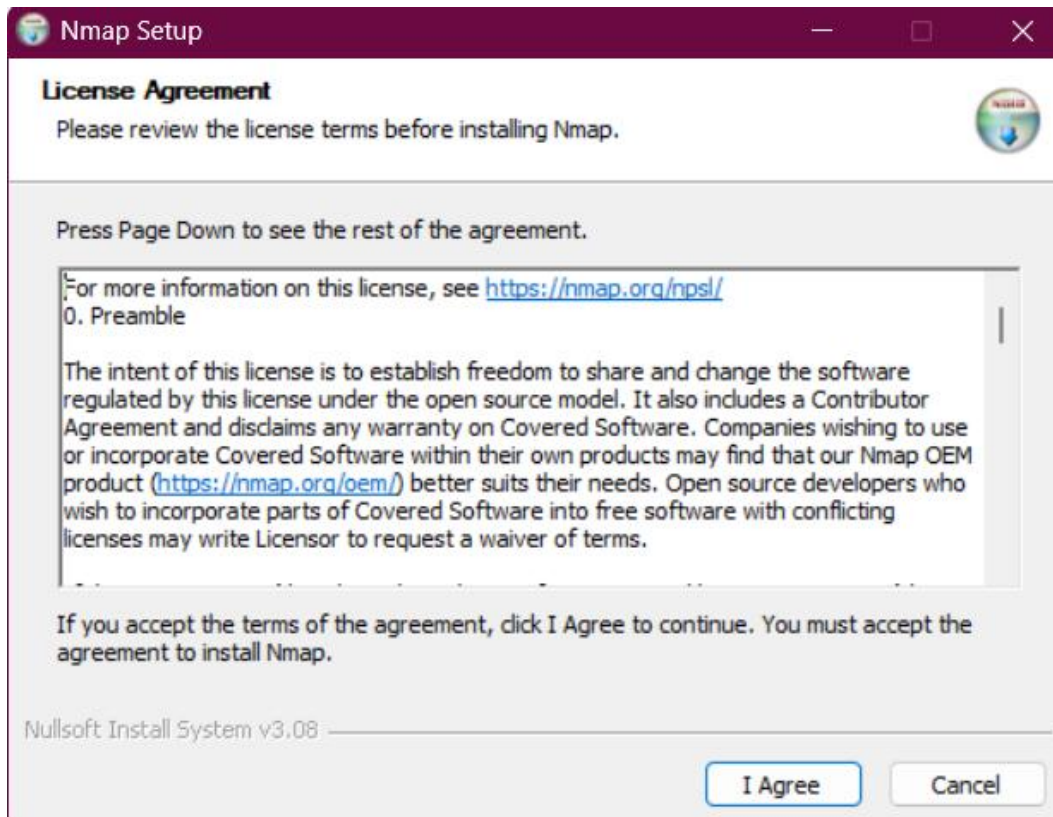

**Note:** The version of Npcap included in our installers may not always be the latest version. If you experience problems or just want the latest and greatest version, download and install [the latest Npcap release](#).

**Latest stable release self-installer:** [nmap-7.97-setup.exe](#)  
**Latest Npcap release self-installer:** [npcap-1.83.exe](#)

We have written [post-install usage instructions](#). Please [notify us](#) if you encounter any problems or have suggestions for the installer.

Locate the downloaded .exe file (e.g., nmap-7.94-setup.exe) in your Downloads folder.

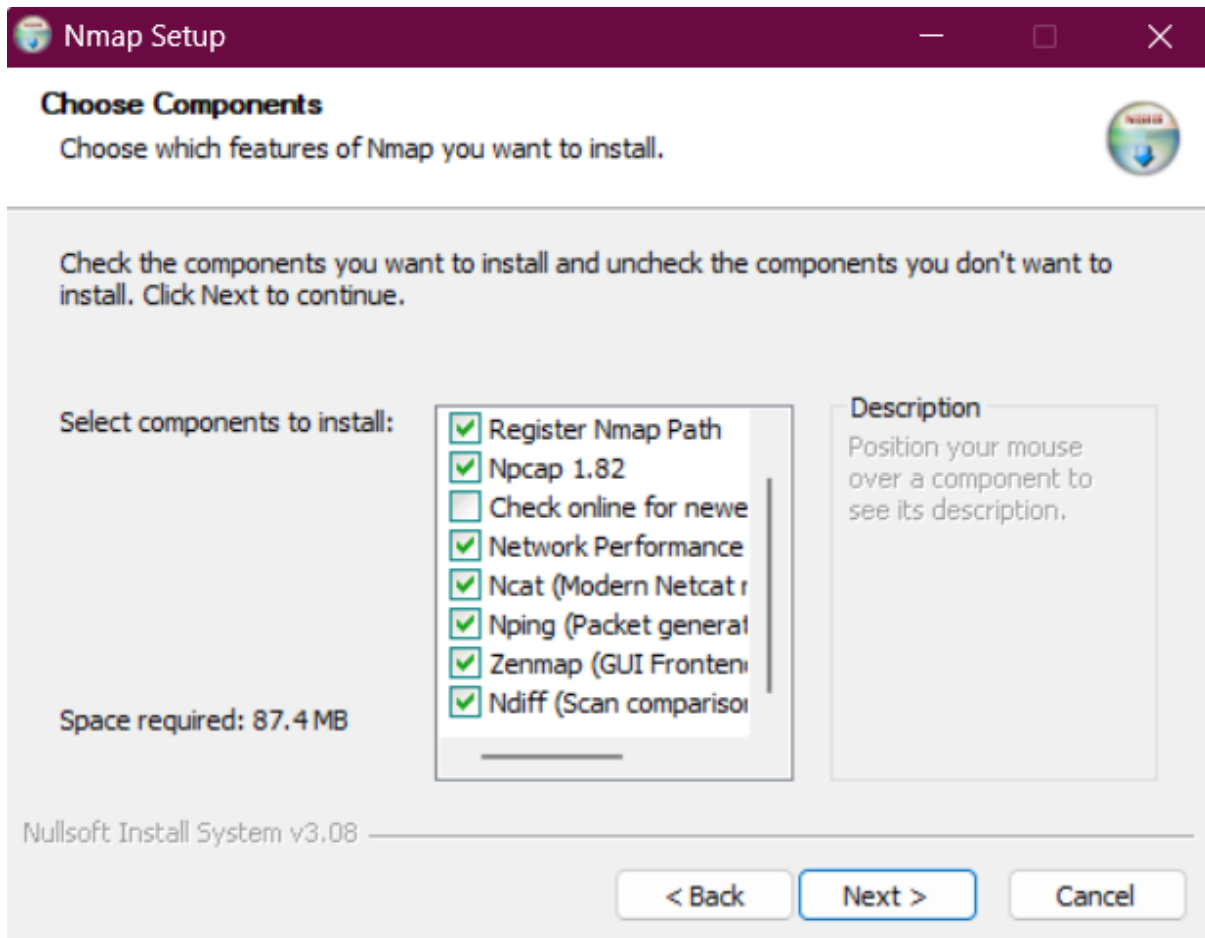

**Double-click** the installer to launch the setup wizard.

Click "**Next**" on the welcome screen to begin the installation process.

Read the license terms.

Select "**I Agree**" to continue.

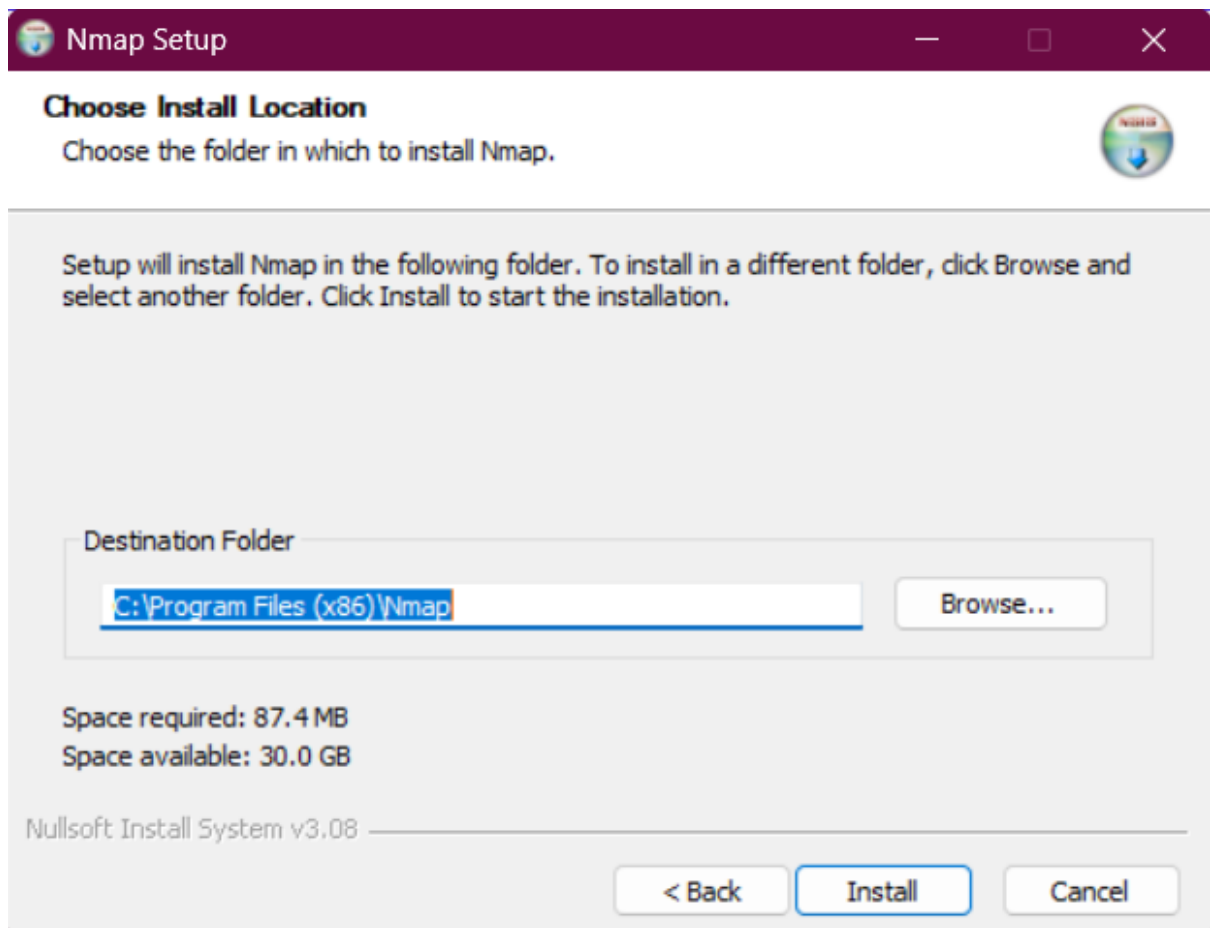

## Choose Components

You can install:

- Nmap
- Zenmap (GUI frontend)
- Npcap (required for packet capturing)

Leave all options selected unless you have a specific reason to exclude any.

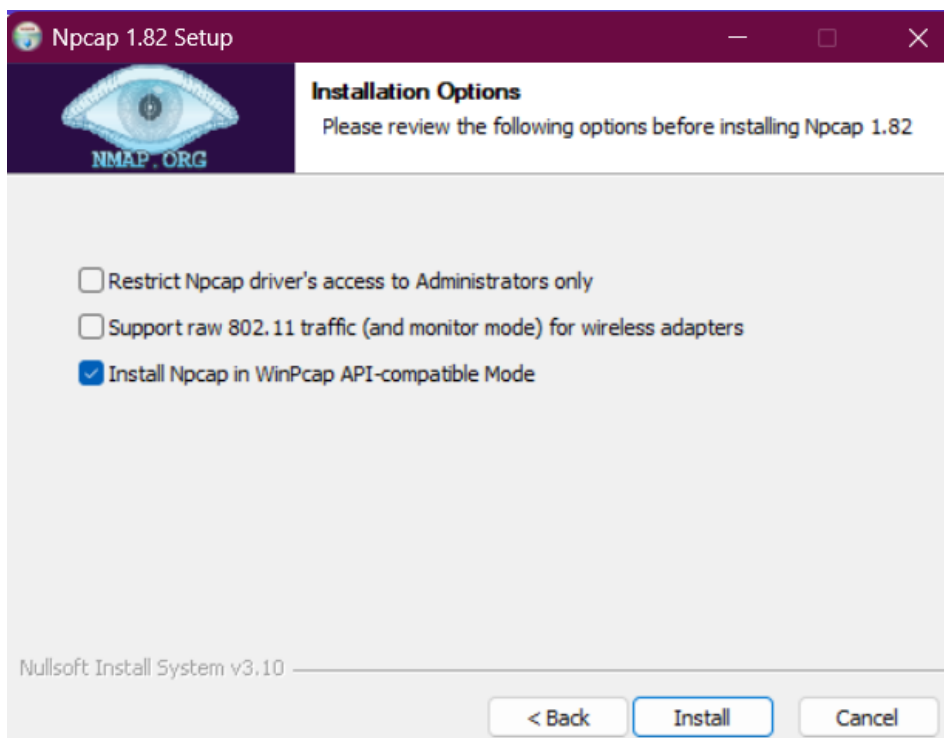

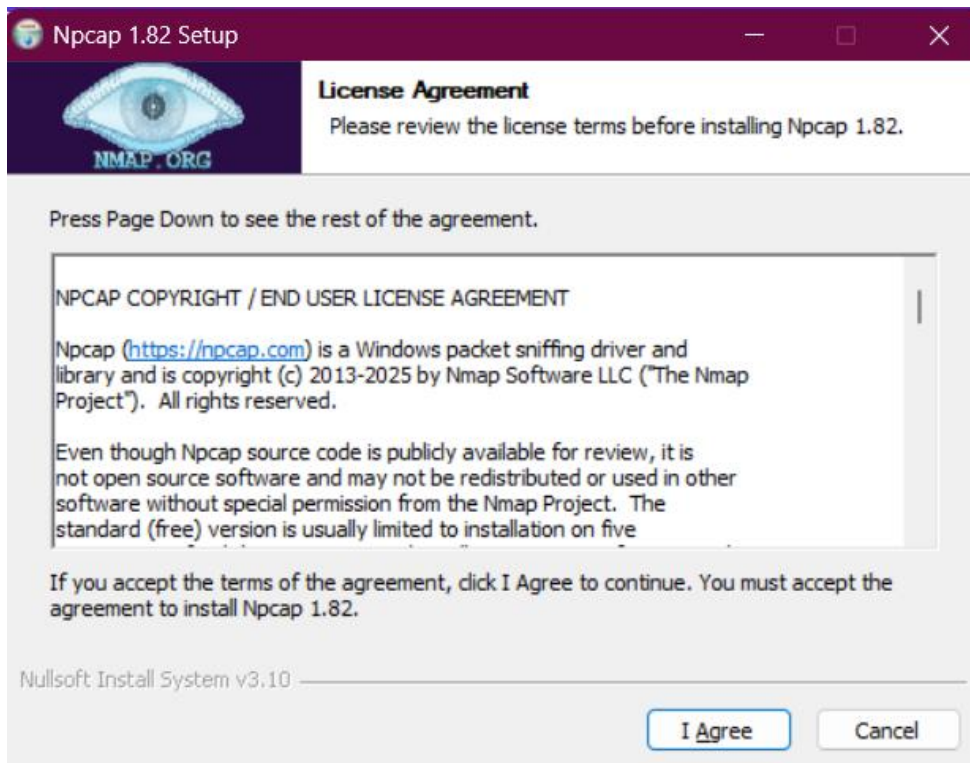

Click **"Next"**.

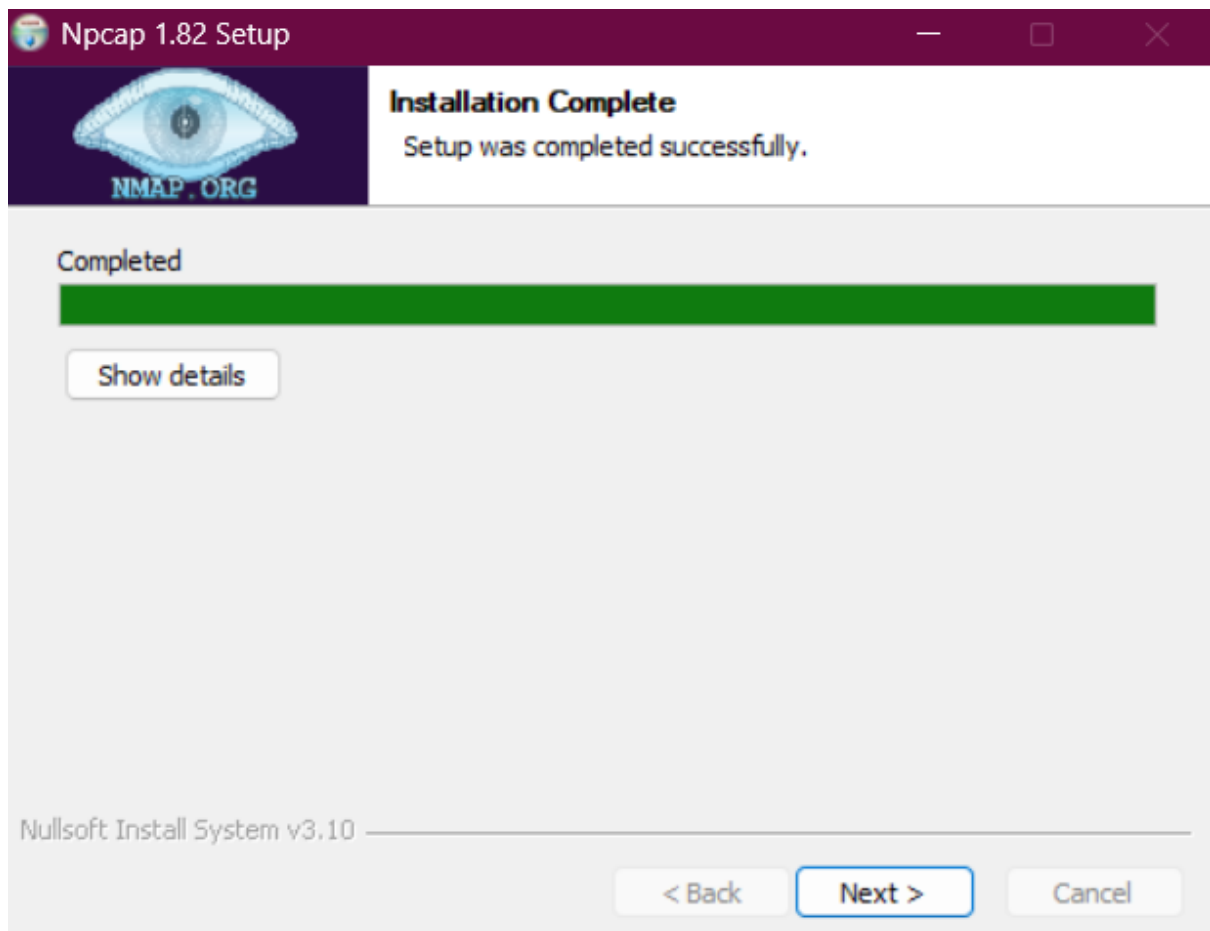

## Choose Install Location

Choose the installation directory (default is usually fine).

Click **"Install"** to begin the installation.

### **Wait for Installation to Complete**

The setup will extract and install all necessary files.

This may take a minute or two.

Npcap 1.82 Setup

## Finished

Thank you for installing Npcap

Npcap has been installed on your computer.

Click Finish to close this wizard.

# Installing Nmap on Linux

## Open the Terminal

Use **Ctrl + Alt + T** to open the terminal on your Linux system.

Before installing, update your local package index to ensure you get the latest version:

**sudo apt update**

```
[prodeath@parrot]-[~]  
$sudo apt install nmap -y  
Reading package lists... Done  
Building dependency tree... Done  
Reading state information... Done  
nmap is already the newest version (7.94+git20230807.3be01efb1+dfsg-4~b  
po12+1).  
nmap set to manually installed.  
0 upgraded, 0 newly installed, 0 to remove and 62 not upgraded.
```

## Install Nmap

Run the following command to install Nmap:

**sudo apt install nmap -y**

```
[prodeath@parrot]-[~]  
$nmap --version  
Nmap version 7.94SVN ( https://nmap.org )  
Platform: x86_64-pc-linux-gnu  
Compiled with: liblua-5.4.4 openssl-3.0.16 libssh2-1.10.0 libz-1.2.13 l  
ibpcr2-10.42 libpcap-1.10.3 nmap-libdnet-1.12 ipv6  
Compiled without:  
Available nsock engines: epoll poll select
```

## Verify the Installation

Check if Nmap was successfully installed by checking its version:

**nmap --version**
